Windows 10 as the last update and the next key of MicrosoftÂ .Q: How to check if application is closed or not in android? I'm working on an audio player application where the user doesn't have to close the app whenever he quits. Because of that I need some help how to detect if the application is closed or not. For example i started the app and it doesn't stop playing when i close the application. I'm working on a Bluetooth headset which doesn't have speakers. Whenever i remove the headset the application need to stop. A: See below two methods, one to check the state of the activity (it will actually return a boolean, so you can do your checking based on that value) ActivityLifecycleMonitor.isActivityResumed(Activity) ActivityLifecycleMonitor.isActivityRunning(Activity) You can find more in ActivityLifecycleMonitor. A: This is what I use to detect if an application has been closed. public class MainActivity extends AppCompatActivity implements OnClickListener { @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_main); } @Override protected void onResume() { super.onResume(); new Runnable() { c6a93da74d
