
I-Doser Drug-Files (81 Doses) Free HOT! Download

Dec 8 , 2016 â€” Revision 3 also contains references to revised versions of NRC Form 4 Cumulative Occupational Dose History and NRC Form 5 Occupational Dose. For the purposes of this document: If you are purchasing Revision 3 on CD, please note that due to changes made to the NRC 4 form, the CD version of NRC 5 is not included. For more information about the NRC 4 and NRC 5 forms and their serial numbers, see the section â€œReference Materials Specifically, there is a â€œReporting_User_Information.pdfâ€ file on the CD for each person or group of people for whom information is required.

Laravel 5.2 belongsToMany
relationship in pivot table
Laravel 5.2. I have 3 tables:
users id, name articles id,
user_id, title, body comments
id, user_id, article_id, body
My problem is that i need to
translate user_id in
comments and articles to
user_id of the

articles/comments. I have one belongsToMany relationship between users and articles, which is fine.

But i also need an belongsToMany relationship between users and comments. The relationship should be used like this: class User { protected \$table = 'users'; protected \$fillable =

```
['name']; public function
articles() { return $this->has
Many('App\Article','user_id','i
d'); } public function
comments() { return $this->
hasMany('App\Comment','us
er_id','id'); } } class Article {
protected $table = 'articles';
protected $fillable =
['title','body']; public function
users() { return $this->belon
```

```
gsToMany('App\User',
        'comments',
        'article_id','user_id'); } }
class Comment { protected
    $table = 'comments';
protected $fillable = ['body'];
    public function articles() {
return $this->belongsToMany
    ('App\Article', 'comments',
    'article_id','user_id'); } } Is
this possible? Thanks for any
```

tips. A: You can just use the withPivot() method for that.

Try this. class User {
protected \$table = 'users';
protected \$fillable = ['name
