## What's New in the Cypheros Desktop Clock?

Cypheros Desktop Clock is a nice utility that shows you the current time. Starts automatically and remembers the position and the transparency if wanted. Can stay in the foreground or in the background. Thanks to the wordsmithing of Bill McCoy (and others), you can keep track of the local time on your desktop with this useful Windows utility. The application does not require installation. Instead, you can just run it from an installed program folder or by clicking the Cypheros Desktop Clock.exe icon found on your desktop. Not only does the program display the local time, it does so in a rather unique way. Once the program is started, it shows the time in a display, which has a clock face and a bar graph, both of which are constantly changing. And since the program automatically sets the clock to your local time, you can manually adjust the appearance of the time display if you

wish. The bar graph displays the amount of time remaining before the current time reaches the set time. The clock face shows the current time with an hourly, daily and yearly time format. Additionally, a calendar icon shows the date as well. The application also has an option that enables you to set the transparency of the time display. While the default setting is "100", the setting can be changed to "90", "50", or "0". The current time can be displayed in the following ways: Ticker Countdown Horizontal Vertical Analog There is also an option to set the window's position. You can choose to have the program run in the foreground or in the background. In addition to local time, this application allows you to display the time in a wide variety of other locales, including: User interface The program's interface is very simple. It has a toolbar and a main window. In the toolbar, there are several tools, such as clock and calendar icons. In the main window, there is a timer, a bar graph, a window to change the time format, a date, and a time zone indicator. If you have the program running in the background, the main window will have a "top" or "bottom" status, depending on whether the program is in the foreground or the background. When the program is in the background, you will have to close the program and reopen it to activate it. After installing and opening the program, you can immediately change the appearance and size of the program. The program displays a desktop icon with a clock face and bar graph. The settings are automatically saved, and you can also reset the current time back to the default setting, if you wish. The program includes some themes to choose from. You can change the time display format, the size of the window, and

## System Requirements For Cypheros Desktop Clock:

A powerful PC is required to run the game, minimum specifications include: Operating system: Windows 7 64 bit (SP1, SP2 or Service Pack 3 or above) or Windows 8, 8.1 64 bit (64-bit mode only).
