It allows you to copy files from one PC to another. It has two different options for copying. You can either copy data files between two disks or a disk and a file server. The later option is for copying files between a file server and a disk on a different PC. This option is useful when you want to send someone files and be able to monitor the progress of sending the files. It allows you to copy files and folders on one PC

to another. You can also copy files from one hard drive to another on the same PC. xCopy2 has options for configuring the size of the copied data, what happens when a file is skipped during the copy process, what happens if you try to copy a file to a partition, and how to navigate to folders on the destination disk and how to copy to subfolders. There is also a list of options for what happens when you set the copying progress screen to "always", "notify", "interactive", or "never". If you want to copy a directory to another folder, you can specify the folders with the option "recurse". You can also select the option "copy files only". xCopy2 comes with a configurable tool to go to the taskbar. You can customize the tool to have different options to go to the taskbar or to open a folder on the destination disk. xCopy2 allows you to open files of any type. It can open files that are in the ".DOC", ".DOCX", ".XLS", ".XLSX", ".PPT", ".PPTX", ".TXT", ".BMP", ".JPG", ".GIF", ".PNG", ".SVG", ".TTF", ".EPS", ".PDF", ".PSD", ".CHM", ".MDB", ".HTA", ".HTM", ".HTML", ".MHTML", ".DOT", ".RTF",

".XFML", ".XUL", ".SVGZ
